

## TECHNOLOGY POSITION

### Gap Analysis: Catalog of Issues and Proposed Actions

March 2025 Version (Marked from [Agenda Item 4-A](#) presented at the December 2024 IAASB Meeting)

The Catalog of Issues and Proposed Actions, beginning on page 2, is informed by the IAASB's Technology Position Statement. Below is an abridged version of this Statement. For the complete Technology Position, including the full Technology Position Statement adopted by the IAASB in September 2024, please visit the IAASB's [Technology page](#).

#### IAASB's Technology Position Statement

**Commitment:** The IAASB is committed to actively facilitating and, where appropriate, encouraging the appropriate use of technology in engagements and systems of quality management (SOQMs) through developing new and revised standards. The IAASB will also develop, or facilitate the development of, non-authoritative materials and foster ongoing engagement around relevant insights about opportunities and risks associated with the use of technology with the IAASB's broader stakeholder community.

**Guiding Actions to Deliver on the Commitment:**

- 1) Embrace technology-driven innovations
- 2) Remove barriers in the standards, real or perceived, to practitioners using technology
- 3) Explore and then introduce, as appropriate, principle-based requirements and application material relating to using technology in engagements
- 4) Address the impact of technology used by reporting entities
- 5) Strike the right balance when referring to opportunities and risks associated with technology
- 6) Align with principles of ethics and ethical requirements
- 7) Ensure scalability and proportionality
- 8) Convene stakeholders and foster ongoing engagement

#	<u>Issue</u> Including basis for concluding that it is an issue	<u>Source of insight</u> About the issue	<u>Proposed actions</u> • Standard-setting actions • Non-authoritative materials • Further information gathering	<u>Possible standards</u> That may be affected by the proposed standard-setting action <sup>1</sup>	<u>Prioritization (High, Medium, Low) and details about proposed actions</u> Prioritization was based on the five criteria on page 6 of the IAASB’s <a href="#">Framework for Activities</a>
<b>Theme#1: Terminology</b>					
1(a)	<p><b>More clarity needed in technology-related terminology</b></p> <p>As the IAASB embarks on delivering on the Technology Position it adopted at the September 2024 IAASB meeting, it is crucial that the terms the IAASB uses to refer to technology (e.g., in its standards and other communications) are internally consistent and understandable.</p> <p>Stakeholders have asked for more clarity about the meaning of technology-related terms used in standards (including standards that are currently under revision) and non-authoritative materials. This perceived lack of clarity is causing confusion about what auditors should be considering when using technology to perform audit procedures (i.e., technology-enabled procedures).<sup>2</sup></p> <p>The IAASB received a significant amount of feedback about technology-related issues relating to a number of standards, including about technology-related terminology, in comment letters on Exposure Draft (ED-500): Proposed International Auditing Standard (ISA) 500 (Revised), <i>Audit Evidence and Proposed Conforming and Consequential Amendments to Other ISAs</i>. Refer to <a href="#">Agenda Item 8-B</a> for the December 2023 IAASB</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• ED-500 feedback</li> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• The standards which contain references to “automated tools and techniques” and other technology-related terminology. See <b>Appendix 1</b> for more information.</li> </ul>	<p><b>High</b></p> <p>A deeper dive is needed to address the terminology concerns.</p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to the first Proposed Action that deals with <b>Issue #13</b> in the <a href="#">proposed project proposal</a>).</p> <p>The Audit Evidence and Risk Response Project Team, in consultation with the Technology Team, may consider, for example, replacing the term “automated tools and techniques” <a href="#">in the ISAs and ISQMs</a> with a new term <a href="#">and</a> developing a definition <a href="#">or description</a></p>

<sup>1</sup> References to standards in this column reflect the existing standards at the time the issue was added to the Catalog. Final scoping decisions, however, will be made within the context of specific standard-setting projects. These projects may impact existing standards or result in new standards that differ from those initially identified.

<sup>2</sup> The term “technology-related procedures” is used throughout the Catalog to maintain consistency with terminology used in the IAASB’s Technology Position. However, this term does not appear in the ISAs. The use of this term is not meant to prejudice the outcome of work that will be carried out by the Audit Evidence and Risk Response project team about the appropriateness of technology-related terminology used throughout the ISAs as described in the Prioritization column.

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>meeting for a comprehensive description about technology-related feedback received on ED-500.</p> <p>Regarding terminology specifically, <a href="#">some</a> respondents on ED-500 recommended that the IAASB:</p> <ul style="list-style-type: none"> <li>• Provide a definition for the term “automated tools and techniques”, particularly if the IAASB intends to add requirements related to this term.</li> <li>• Consider replacing the word “automated” in the term “automated tools and techniques” with another term.</li> </ul> <p>We have also heard that it is unclear what the term “automated tools and techniques” is meant to apply to. For example, does the term also refer to auditing software used to compile audit documentation (i.e., the audit platform), or <del>when</del> Microsoft Excel <del>is</del> used to perform routine calculations?</p> <p>See <b>Appendix 1</b> for an inventory of technology-related terms used in the standards (e.g., technological resources, automated tools and techniques, computer-assisted audit techniques).</p>				<p>of the term <a href="#">which addresses</a>, <del>and describe</del> what types of technologies are within the scope of that term.</p>
<b>Theme#2: Conceptual Framework</b>					
2(a)	<p><b>Inherent limitations of an audit</b></p> <p>As described in ISA 220 (Revised),<sup>3</sup> technology-enabled procedures may <a href="#">enhance the quality of audits by allowing</a> the auditor to evaluate large amounts of data more easily to, for example, provide deeper insights, identify unusual trends or more effectively challenge management’s assertions, which enhances the ability of the auditor to exercise professional skepticism. <a href="#">Similarly, the use of technology by entities under audit in their information systems and financial reporting processes may enhance the quality of their financial reporting by, for example, enhancing the quality of their automated controls.</a></p> <p><del>The use of technology in audits, including robotic process automation, is also enhancing the efficiency of audits by, for example, reducing or eliminating more manual procedures.</del></p>	<ul style="list-style-type: none"> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• TBD</li> </ul>	<p><b>MediumLow</b></p> <p>Additional information gathering will include outreach with stakeholders, including representatives from academia, to further investigate the matter.</p>

<sup>3</sup> ISA 220 (Revised), *Quality Management for an Audit of Financial Statements*, paragraph A64

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p><del>However, the growing use of technology by auditors and entities is also</del> Accordingly, the <del>growing use of technology-enabled procedures is</del> raising questions about whether the inherent limitations of an audit that are described throughout the ISAs and ISQMs remain appropriately described, contextualized, and relevant today. <del>For example, the use of black-box technologies by entities in their financial reporting processes may make it more challenging or even impracticable for the auditor to respond to certain risks arising from the use of these technologies by entities (see also Issue 6(b)).</del></p> <p>The Technology Team performed a preliminary review of the <del>3433</del> references to inherent limitations throughout the ISAs. None of the references appear to be inappropriate or irrelevant within the context of the prevailing level of technologies in use today. However, a deeper dive will be required on whether any of the <del>current</del> references to inherent limitations of an audit <del>in the IAASB's standards</del> need to be modernized, <del>which may include introducing new inherent limitations in the standards that have arisen because of the use of emerging technologies by entities and auditors,</del> while reinforcing the auditor's responsibility to obtain <del>sufficient and appropriate audit evidence.</del></p>				
2(b)	<p><del>Possible i</del> <b>Impact of the growing use of technology-enabled procedures on expectations about <u>the use of technology in audits and the concept of the sufficiency and appropriateness of audit evidence</u> <u>reasonable assurance</u></b></p> <p>How the auditor <del>chooses to obtain</del> audit evidence, including whether technology-enabled procedures are used to obtain such evidence, does not change the underlying objective of an audit which is to obtain reasonable assurance by obtaining sufficient appropriate audit evidence to reduce audit risk to "an acceptably low level".<sup>4</sup></p> <p>Yet, technology-enabled procedures may enable auditors to obtain <del>significantly more audit evidence or more persuasive</del> audit evidence <del>in the same amount of time used to</del> <del>than perform</del> traditional audit procedures (e.g., manual audit procedures). This may, <del>in turn,</del> <del>create an expectation by stakeholders</del> <del>the change the public's perceptions (e.g., stakeholders of the audit)</del> <del>that auditors should be using technology to enhance the quality of their audits and elevate expectations about what reasonable assurance is in an audit.</del></p>	<p><del>Guiding action #2</del></p> <ul style="list-style-type: none"> <li>• <a href="#">Stakeholder Advisory Council</a></li> <li>• <a href="#">Academics</a></li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 200</li> </ul>	<p><b>Low</b></p> <p>Additional information gathering will include outreach with stakeholders, including representatives from academia, to further investigate the matter.</p>

<sup>4</sup> ISA 200, Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance with International Standards on Auditing, paragraph 17

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p><del>what is considered to be sufficient and appropriate audit evidence that the auditor uses to draw reasonable conclusions on which to base the auditor's report.</del></p> <p><del>Stakeholders have asked the IAASB to monitor</del> should explore whether there are in fact evolving expectations by users of financial statements and other stakeholders, including such as regulators and preparers, based on the increased availability of cost-effective technologies for <del>to</del> auditors and whether and, if so, how that impacts key concepts in the IAASB's standards, including the concept of <del>sufficient appropriate audit evidence</del> reasonable assurance.</p>				
2(c)	<p><b>Auditing framework for continuous auditing</b></p> <p>The concept of "continuous auditing" <del>of financial statements</del> first emerged in the late 1980s. <u>The first formal guidance on continuous auditing, often called the Red Book, was published jointly by the Canadian Institute of Chartered Accountants (CICA) and the American Institute of Certified Public Accountants (AICPA) in 1999. It defines continuous auditing as a methodology that enables auditors to provide near-real-time assurance through reports issued simultaneously with, or shortly after, relevant events (CICA/AICPA, 1999).</u></p> <p><del>With a</del>Advancements in technology <u>have made</u> <del>and the adoption of enterprise resource planning (ERP) systems,</del> continuous auditing <del>is now seen as</del> increasingly feasible. <u>For example, cloud computing now provides the necessary infrastructure, enabling automated data collection and analysis of client financial data without significant on-premises hardware.</u></p> <p>In 2015, the <del>American Institute of Certified Public Accountants (AICPA)</del> published <i>Audit Analytics and Continuous Audit: Looking Toward the Future</i>, a collection of essays <del>by subject matter experts. A recurring theme in the essays is the</del> <u>emphasizing the</u> need for global auditing standards to evolve to support continuous auditing practices. <u>For example, the essays noted that the current auditing standards remain rooted in the traditional auditing paradigm whereby transactions are sampled, however, they provide little to no guidance on leveraging techniques such as continuous auditing, which examine large populations of</u></p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• <u>Guiding action #2</u></li> <li>• <u>Academics</u></li> <li>• <u>Practitioners</u></li> <li>• <u>National Standard Setters (NSS)<sup>5</sup></u></li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• TBD</li> </ul>	<p><b>Low</b></p> <p>Continuous auditing, including whether it gains widespread adoption, will be monitored as part of Component 3 of the IAASB's Technology Position.</p>

<sup>5</sup> [Jurisdictional and National Auditing Standard Setters \(NSS\) that form part of the IAASB-NSS liaison group \(see information on the About IAASB webpage\)](#)

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p><del>transactions. This gap may discourage auditors from embracing transformative approaches and limit the potential for real-time, comprehensive audits.</del></p> <p><del>The first guidance on continuous auditing, often called the Red Book, was published jointly by the Canadian Institute of Chartered Accountants (CICA) and the AICPA in 1999. It defines continuous auditing as a methodology enabling auditors to provide near-real-time assurance through reports issued simultaneously with, or shortly after, relevant events (CICA/AICPA, 1999).</del></p> <p><del>This topic has been included in this Catalog for ongoing monitoring. A growing substantial shift toward continuous reporting by entities and continuous auditing by assurance providers may eventually require give rise to the need for more extensive revisions to the IAASB's standards than those is currently contemplated in proposed actions of considered in this Catalog.</del></p>				
<b>Theme#3: Quality Management</b>					
3(a)	<p><b>Firm-level approval of technological resources used in engagements</b></p> <p>Advancements in the sophistication of technological resources used in engagements since International Standard on Quality Management 1 (ISQM 1)<sup>6</sup> became effective have given rise to the need for additional information gathering to evaluate whether the standard's principles-based requirements and application material remain sufficient to guide firms on how to manage risks (i.e., quality management) associated with <del>emerging-new and emerging</del> technologies.</p> <p><del>For example, we understand that s</del>Several firms have recently <del>approved-started to deploy more complex technological resources, including generative</del> artificial intelligence applications (Gen AI) <del>powered by neural networks, in for use by</del> their assurance practices <del>in engagements. Some of these technological resources are generally considered to be One notable risk is the explainability of Gen AI resources. Gen AI is generally regarded as a "black-box" systems, where it is challenging, or even impracticable, to understand how the</del></p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #2</li> <li>• Guiding action #5</li> <li>• Guiding action #7</li> <li>• Stakeholder Advisory Council</li> <li>• Practitioners</li> <li>• National Standard SettersNSS</li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISQM 1</li> </ul>	<p><b>High</b></p> <p>The Technology Team recommends further information gathering about whether the relevant principles in ISQM 1 remain sufficient <u>to help firms manage the risks and opportunities associated with emerging technologies (e.g., the clarity, relevance and consistency of firm-level quality management considerations).</u> <del>and whether more principles-based specificity may be appropriate with respect to firm-level quality management considerations, including around emerging</del></p>

<sup>6</sup> ISQM 1, Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p><del>system is arriving at its conclusions/and this creates difficulties for assurance practitioners who need to understand and validate Gen AI driven</del> outputs <a href="#">(see also Issue 6(b))</a>.</p> <p>There are also significant data privacy and <a href="#">data</a> security <del>concerns</del> <a href="#">risks</a> that also need to be considered and managed by firms, particularly as much of the data that assurance practitioners use is proprietary client data.</p>				<p><del>technologies</del> <a href="#">(Also refer to Issues 3(b) and 3(c) below for related engagement-level quality management considerations)</a>.</p>
3(b)	<p><b>Engagement-level approval of technological resources</b></p> <p>The considerations for firm-level approval of technological resources also apply when engagement teams independently obtain or develop technological resources that have not been pre-approved by the firm. As these resources become increasingly accessible and cost-effective, engagement teams may introduce their own technological resources for use in performing technology-enabled procedures in engagements. Accordingly, the same issue described in Issue 3(a) above also applies here.</p> <p>The quality management principles governing firm-level approval of technological resources should similarly apply to engagement teams, ensuring any independently acquired or developed technological resources used in technology-enabled procedures, meet the same quality standards.</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #3</li> <li>• Guiding action #5</li> <li>• Guiding action #7</li> <li>• <a href="#">Stakeholder Advisory Council</a></li> <li>• <a href="#">Practitioners</a></li> <li>• <a href="#">NSS</a></li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 220 (Revised)</li> </ul>	<p><b>High</b></p> <p>The Technology Team recommends further information gathering about whether the relevant principles in ISA 220 (Revised) remain sufficient <a href="#">to help auditors manage the risks associated with emerging technologies (e.g., the clarity, relevance and consistency of engagement-level quality management considerations)</a> <del>and whether more principles-based specificity may be required.</del> <a href="#">(Also refer to Issue 3(a) above for related firm-level quality management considerations)</a>.</p>
3(c)	<p><b>Technological resources used in engagements which are developed by service providers</b></p> <p>Many firms acquire or license technological resources from <del>service providers</del> <a href="#">third parties (which ISQM 1 refers to as “service providers”)</a> which the <del>firms</del> <a href="#">y</a> then approve and roll out for use by their practitioners in their assurance engagements. Larger firms tend to develop a greater proportion of their technological resources themselves <a href="#">(i.e., “in-house”)</a> while smaller firms tend to acquire or license a greater proportion of their technological resources from service providers.</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #2</li> <li>• Guiding action #7</li> <li>• Audit regulators</li> <li>• <a href="#">Service providers</a></li> <li>• <a href="#">Practitioners</a></li> <li>• <a href="#">NSS</a></li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISQM 1</li> <li>• ISA 220 (Revised)</li> </ul>	<p><b>High</b></p> <p>The Technology Team recommends further information gathering about whether ISQM 1 or ISA 220 (Revised) need targeted technology-related revisions around the use of technological resources developed by service providers.</p>

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>However, service providers <u>will typically</u> limit the amount of information <u>they share with firms</u> <del>—the (e.g., the detailed specifications about how the technological resource was developed—)</del> <del>they are able to share with firms</del> in order to protect their intellectual property. This creates quality management challenges for <u>audit</u> firms <u>because this creates challenges to sufficiently ascertain whether the technological resources are operating as intended when approving the</u> <del>who are unable to obtain a sufficient understanding of the logic and processing and data sources of those technological resources before they are</del> <del>roll</del> <u>technological resources for use in</u> <del>ed out to</del> their <u>audit assurance</u> practices.</p> <p><u>Based on our outreach,</u> <del>the IAASB understands</del> <del>has received feedback</del> that <u>the issue is disproportionately impacting smaller</u> firms <u>making leaders at those firms</u> <del>are sometimes</del> reluctant <u>to acquire or license</u> <del>to use</del> third-party developed technological resources to avoid regulatory scrutiny.</p> <p>In this context, <u>it is worth exploring whether</u> <del>there could be standard-setting opportunities to ensure</del> ISQM 1 and ISA 220 (Revised) <u>may be do not</u> unnecessarily <u>restrictive with respect</u> <del>stifle innovation in engagements by acting as a barrier</del> to the use of technological resources developed by service providers.</p> <p>The IAASB may also develop non-authoritative materials on how the assurance market is dealing with these challenges. For example, the non-authoritative material may <u>provide guidance</u> <del>over</del> <u>on how firms are managing the issue, including requiring that service providers provide special-purpose assurance reports about the certification practices by</u> <del>firms to authorize technological resources for use and describe the efforts by service providers to help firms comply with their quality management obligations including independent reviews of the soundness of the logic or and effectiveness of the</del> processing of the technological resources <u>they are licensing to firms.</u> <del>by independent third parties.</del></p>				
<b>Theme#4: Determining whether to perform technology-enabled procedures</b>					
4(a)	<b>Exploring introducing requirements and application material about determining whether technology-enabled procedures are required to achieve engagement objectives</b>	<ul style="list-style-type: none"> <li>Guiding action #3</li> <li><u>Guiding action #7</u></li> </ul>	<ul style="list-style-type: none"> <li>Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>ISA 315 (Revised 2019)<sup>7</sup></li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to</p>

<sup>7</sup> ISA 315 (Revised 2019), *Identifying and Assessing Risks of Material Misstatement*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>There are no <del>specific-explicit</del> requirements in the standards for practitioners to determine whether technology-enabled procedures are required to achieve engagement objectives. Guiding action #3 of the Technology Position Statement states the Board will explore the need to introduce such principles-based requirements and application material in its standards.</p> <p><u>Based on outreach undertaken, the IAASB <del>We</del> understands that there may be circumstances when it will be challenging, or in some cases impracticable, for auditors to obtain sufficient appropriate audit evidence to address financial-statement or assertion-level risks without using technology-enabled procedures. Some examples that stakeholders have provided include:</u></p> <ul style="list-style-type: none"> <li><del>At there ar</del> audits that cannot be done without the use of technology-enabled procedures. For example, <del>audits</del> of entities with crypto-asset activities (e.g., <del>crypto miners, companies that hold crypto-assets, etc.</del>) may require the use of “block explorers” to <u>verify sales and purchases of crypto-asset on</u> <del>interrogate</del> the applicable blockchains.</li> <li><u>Audits of online gaming entities to, for example, test amortization of “game props” or to assess user lifecycles.</u></li> <li><del>There may also be other circumstances when it will be impracticable for auditors to obtain sufficient appropriate audit evidence to address assertion-level risks without using technology-enabled procedures. For example, Responding to assessed risks in</del> expected credit loss (ECL) estimates at <del>larger bigger</del> financial institutions- <u>involving typically involve very</u> complex estimation methods and <u>dependances on significant data inputs from several IT systems.</u> <del>auditors often find it necessary to design and perform technology-enabled procedures to evaluate the reasonableness of management's ECL estimates.</del></li> </ul> <p>Some stakeholders have also suggested that the auditor may need to design and perform technology-enabled procedures to <u>adequately audit entities with fully digitalized information systems or when</u> <del>appropriately</del> <u>responding</u> to risks arising from the use of sophisticated IT <del>systems</del> <u>processes</u>.</p>	<ul style="list-style-type: none"> <li><a href="#">Practitioners</a></li> <li><a href="#">Academics</a></li> </ul>		<ul style="list-style-type: none"> <li>ISA 330<sup>8</sup></li> <li>ISQM 1</li> <li>ISA 220 (Revised)</li> </ul>	<p><b>Issue #13</b> in the <a href="#">proposed-project proposal</a>.</p> <p>There may also be firm-level or engagement-level quality management implications that should be considered (see also Issues 3(a)–3(c) above for more information).</p>

<sup>8</sup> ISA 330, *The Auditor's Responses to Assessed Risks*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
4(b)	<p><b>Barriers to using technology-enabled procedures that arise because of how data is produced and maintained by entities</b></p> <p>The ability of auditors to use technology-enabled procedures in their audits depends on whether the entities under audit have digitalized information systems and the availability, form, or restrictions around the data from those systems.</p> <p>Specifically, the following factors apply:</p> <ul style="list-style-type: none"> <li>• Availability of data in a usable form, and of sufficiently high quality;</li> <li>• Limitations in accessing information, whether due to restrictions imposed by data privacy laws or regulations, or to entities’ concerns about data security once transferred to the auditor; and</li> <li>• Challenges with collecting, extracting, storing, transferring, and transforming data from entities’ systems, to be usable by the auditor.</li> </ul> <p>The Pre-finalization Holding Package of Proposed ISA 500 (Revised)<sup>9</sup> includes application material highlighting these matters as areas for auditors to be aware of when planning to obtain evidence using technology-enabled procedures.</p>	<ul style="list-style-type: none"> <li>• <del>Guiding action #2</del></li> <li>• Guiding action #4</li> <li>• ED-500 feedback</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised)</li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #2</b> in the <a href="#">proposed-project proposal</a>).</p>
4(c)	<p><b>The IAASB’s role in promoting best practices</b></p> <p>With the adoption by the IAASB of its <a href="#">Technology Position</a> at its September 2024 meeting, the Board has formally recognized technology’s transformative potential to improve audit and assurance quality. It was in this context that the IAASB has committed in its Technology Position Statement to facilitate and, where appropriate, encourage the use of technology in engagements and SOQMs.</p> <p>Audit regulators worldwide have more recently started to feature in their inspection reports observations about best practices they are observing in their inspections of audits, including how technology-enabled procedures used in audits have improved audit quality. This was a strategic shift by audit regulators to elevate audit quality at the firms by being deliberate about balancing positive and critical feedback relating to audit work (i.e., audit findings).</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• <a href="#">Technology Position Statement</a></li> <li>• <a href="#">Practitioners</a></li> </ul>	<ul style="list-style-type: none"> <li>• Non-authoritative materials</li> </ul>	n/a	<p><b>Medium Low</b></p> <p>The Technology Team believes the IAASB has a role to play in promoting best practices. -While there is some room for integrating considerations about best practices in the standards, this may be more effectively pursued in <del>the IAASB’s</del> non-authoritative materials. <a href="#">These materials may be developed by the IAASB directly or the IAASB may facilitate the</a></p>

<sup>9</sup> The latest version of proposed ISA 500 (Revised), *Audit Evidence*, that was presented to the Board at its March 2024 meeting has been referred to as the Pre-Finalization Holding Package of Proposed ISA 500 (Revised).

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	The question for the Board is whether it advisable for the IAASB to also develop content that deals with “best practices” for our stakeholders.				<a href="#">development of such materials by working with NSS or other parties.</a>
<b>Theme#5: Entities’ use of technology</b>					
5(a)	<p><b>Identifying, assessing, and responding to risks arising from the use of IT by entities</b></p> <p>As described in guiding action #4 of the IAASB’s Technology Position Statement, the IAASB will address the impact of technology used by reporting entities.</p> <p>ISA 315 (Revised 2019) introduced a strong foundation to guide an auditor’s identification and assessment of risks arising from the use of IT by entities. However, stakeholders have expressed a lack of clarity about how the auditor addresses such risks in their further audit procedures. Additionally, a publication (April 2024) by The Center for Audit Quality (CAQ) called: <a href="#">Auditing in the Age of Generative AI</a> refers to a survey that found that one in three audit partners see companies in their primary industry sector deploying or planning to deploy AI in their financial reporting processes. The CAQ goes on to describe several new risks that emerge from the use of Gen AI by entities.</p> <p>The emergence of a new class of risks associated with the use of AI by entities raises questions about whether the ISAs continue to provide a robust foundation to guide an auditor’s identification, assessment, and responses to assessed risks arising from the use of emerging technologies by entities, including the use of Gen AI.</p>	<ul style="list-style-type: none"> <li>• Guiding action #4</li> <li>• Guiding action #5</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• <a href="#">ISQM 1</a></li> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised)</li> </ul>	<p><b>High</b></p> <p>The considerations related to the impact of entities’ use of IT on auditor’s responses to risks of material misstatement, and on their evaluation of audit evidence is in scope of the Audit Evidence and Risk Response project (refer to <b>Issues #9</b> and <b>#17</b> in the <a href="#">proposed-project proposal</a>).</p> <p><b>Medium</b></p> <p>The Technology Team will continue to monitor emerging issues that are impacting the financial reporting ecosystem, which may inform ongoing or future standard-setting projects.</p> <p>The IAASB may also develop non-authoritative materials that address relevant matters.</p>
5(b)	<p><b>Impact on the audit when entities use service organizations that use emerging technologies</b></p> <p>Like in issue 5(a) above, which deals with the increasing sophistication of technologies used by entities under audit, service organizations that provide services to user entities may also be using sophisticated technologies to perform their services. This may also give rise to</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #3</li> <li>• Feedback on the IAASB’s Strategy</li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 402</li> </ul>	<p><b>LowMedium</b></p> <p>The IAASB did not prioritize revising ISA 402 as a proposed project for its 2024-2027 Work Plan. This was based on balancing the feedback</p>

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>risks from the use of IT at service organizations that need to be identified, assessed, and responded to by auditors of user entities (i.e., user auditors).</p> <p>User auditors typically rely to some extent on the work performed by auditors of the service organizations' controls (i.e., service auditors) to identify, assess, and respond to risks of material misstatement arising from the outsourced services provided by service organizations as addressed in ISA 402.<sup>10</sup></p> <p>Challenges faced by service auditors to support their Type 2 reports, as contemplated in ISA 402, because of the increasingly sophisticated technologies used by service organizations to perform their services, will also create challenges for user auditors.</p> <p>For example, the IAASB has received feedback that this challenge has been particularly pronounced in audits of entities with crypto-asset activities. These user entities typically rely on service organizations to custody their crypto-assets and, in some cases, keep a record of their crypto-asset holdings.</p>	and Work Plan for 2024-2027			<p>from respondents across stakeholder groups, using the criteria as <a href="#">elaborated outlined</a> -in the public agenda papers for the Strategy and Work Plan <a href="#">and the consideration of available resources</a>.-</p> <p>However, the Technology Team will continue to monitor emerging technologies used by entities, including service organizations, that the Board may consider in any decision to adjust the Work Plan (or for a future Wok Plan). The Technology Team will also consider the need to develop non-authoritative materials on this topic.</p>
5(c)	<p><b>Identifying opportunities associated with the use of technology by entities</b></p> <p>As described in guiding action #5 of the IAASB's Technology Position Statement, the IAASB will strike the right balance when referring to opportunities and challenges associated with the use of technology by practitioners and entities. This guiding action recognizes the potential of the use of technology to enhance the quality of financial reporting and assurance engagements.</p> <p>However, with regard to entities' use of technology, the auditing standards are not designed to deal with <i>opportunities</i> associated with the use of technology by entities. Rather, ISA 315 (Revised 2019) requires the auditor to identify and assess risks of material misstatement, including risks arising from the use of IT by the entity. The auditor then designs and performs further audit procedures, in accordance with ISA 330 and other ISAs, to respond to assessed risks, including risks arising from the use of IT by the entity.</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #5</li> </ul>	<ul style="list-style-type: none"> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• n/a</li> </ul>	<p><b>Low</b></p> <p>The Technology Team believes the IAASB has a role to play in describing how the use of technology by entities may enhance the quality (e.g., reliability) of their financial reporting, which may, in turn, lead to opportunities for auditors to enhance the quality and efficiency of their work. However, the Technology Team proposes that this should be pursued in non-authoritative materials.</p>

<sup>10</sup> ISA 402, *Audit Considerations Relating to an Entity Using a Service Organization*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
<b>Theme#6: Performing technology-enabled procedures</b>					
6(a)	<p><b>Exploring introducing requirements and application material about considerations for the appropriate use of technology-enabled procedures</b></p> <p>Designing and performing technology-enabled procedures gives rise to unique challenges that need to be carefully managed by practitioners. Audit regulators are raising inspection findings that point to deficiencies in the following three areas:</p> <ul style="list-style-type: none"> <li>• Auditors not considering the reliability and relevance of the data inputs,</li> <li>• Auditors not determining whether the technology-enabled procedure operate as designed, and</li> <li>• Auditors not determining whether the outputs meet the purpose for which the technology-enabled procedure is designed to address.</li> </ul> <p>A requirement (paragraph 10A) and application material (paragraphs A65A–A65M) in the Pre-Finalization Holding Package of Proposed ISA 500 (Revised) has previously been presented to the Board aim to capture the areas described above.</p> <p>Further to the objective of the Board to temporarily pause the revision of Proposed ISA 500 (Revised) in order to facilitate an integrated approach to Audit Evidence and Risk Response, including with respect to technology-related matters, the Board should consider whether the requirement described above, or elements of the requirement and application material, appropriately belong in the proposed Audit Evidence standard.</p>	<ul style="list-style-type: none"> <li>• Guiding action #3</li> <li>• Guiding action #7</li> <li>• ED-500 feedback</li> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• <a href="#">ISA 220 (Revised)</a></li> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-Finalization Holding Package of Proposed ISA 500 (Revised)</li> </ul>	<p><b>High</b></p> <p>This issue is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #13</b> and <b>#17</b> in the <a href="#">proposed-project proposal</a>).</p>
6(b)	<p><b>Interpretability or explainability associated with how a technology-enabled procedure arrives at its outputs</b></p> <p>A lack of interpretability or explainability<sup>11</sup> associated with a technology-enabled procedure (e.g., how the technology-enabled procedure arrives at its outputs, how inputs lead to outputs) makes it challenging or, in some cases impracticable, for firms or auditors to comply with certain aspects of the IAASB's standards.</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #6</li> <li>• Technology experts</li> <li>• <a href="#">ED-500 feedback</a></li> <li>• <a href="#">Academics</a></li> <li>• <a href="#">Practitioners</a></li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• ISQM 1</li> <li>• ISA 220 (Revised)</li> <li>• Pre-finalization Holding Package of</li> </ul>	<p><b>High</b></p> <p>The issue is in scope of the Audit Evidence and Risk Response project (refer to <b>Issues #13</b> and <b>#17</b> in the <a href="#">proposed-project proposal</a>).</p>

<sup>11</sup> [Link to resources from IBM](#) on explainable AI, including the difference between the interpretability and explainability of an AI system

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>This issue is becoming critical as the use of black-box technologies, including some artificial intelligence (AI) applications including Gen AI, <del>are</del> likely to become ubiquitous in engagements and systems of quality management.</p> <p>It is in this context that the IAASB should consider whether it remains appropriate for the IAASB’s standards to require firms or auditors to understand the logic and processing of technology-enabled procedures in all circumstances, or whether it may be sufficient, under certain circumstances, for the auditor to engage directly with the outputs (see also Issue 6(a)).</p> <p><u>Based on outreach undertaken, the IAASB understands that some firms are no longer expecting that the certification of Gen AI technological resources used in engagements, for example, will include a thorough understanding of</u> <del>Some experts believe that auditors should focus on the outputs of a technology-enabled procedure rather than its</del> logic and processing <u>of the technology. The firms recognize many Gen AI applications are generally black-box technologies that rely on complex neural networks and deep learning models making it difficult to fully interpret how inputs are transformed into outputs. Nevertheless, these firms also believe that</u> <del>They note that requirements to understand the logic and processing of technology-enabled procedures may stifle innovation. They believe that the</del> auditors can still effectively evaluate whether <u>the use of at this type of technology</u> <del>technology-enabled procedure</del> meets the intended purpose of <u>an audit</u> <del>the</del> procedure without <u>the need to</u> understand <del>ing</del> how it arrived at its outputs.</p>	<ul style="list-style-type: none"> <li>• <a href="#">NSS</a></li> </ul>		Proposed ISA 500 (Revised)	
6(c)	<p><b>Categorization of technology-enabled procedures</b></p> <p>We’ve heard feedback that it is becoming increasingly more challenging to understand how technology-enabled procedures should be categorized, including:</p> <ul style="list-style-type: none"> <li>• Whether they are risk assessment procedures or further audit procedures, <u>or both</u>;</li> <li>• Whether they are tests of controls or substantive procedures or both (i.e., dual-purpose tests); and</li> <li>• Relating specifically to substantive procedures, whether they are tests of details (ToD) or substantive analytical procedures (SAP).</li> </ul>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• ED-500 feedback</li> <li>• Practitioners</li> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised)</li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issues #14</b> and <b>#15</b> in the <a href="#">proposed project proposal</a>).</p>

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>The categorization issue was described as a barrier to practitioners using technology in the Technology Position Issues Paper presented to the Board at its June 2024 meeting (see <a href="#">Agenda Item 5</a>).</p> <p>Some of these categorization issues have been addressed in the IAASB’s non-authoritative materials. However, some stakeholders would like to see some of this non-authoritative material integrated, as appropriate, into the IAASB’s standards.</p>			<ul style="list-style-type: none"> <li>• ISA 520<sup>12</sup></li> </ul>	
6(d)	<p><b>Challenges associated with the use of technology-enabled substantive analytical procedures (SAP)</b></p> <p>The increased use of “data analytics” is giving rise to questions about how these technology-enabled procedures map to the requirements in <a href="#">ISAs, including</a> ISA 520 which deals with the auditor’s use of analytical procedures as substantive procedures.</p> <p>The IAASB has issued non-authoritative materials to address questions of interpretation about the requirements in the ISAs relating to using automated tools and techniques (ATT) in performing audit procedures including <a href="#">Substantive Analytical Procedures</a> (refer to the <a href="#">IAASB’s Technology Page to access the FAQ on The Use of Automated Tools and Techniques in Performing Audit Procedures</a>). However, questions continue to be raised on this topic, indicating that there is a need for additional clarity, including standard-setting on this topic.</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #3</li> <li>• Audit regulators</li> <li>• Practitioners</li> <li>• ED-500 feedback</li> <li>• Strategy and Work Plan 2024-2027 feedback</li> <li>• <del>NSSational Standard-Setters</del></li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 330</li> <li>• ISA 520</li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issues #11 and #15</b> in the <a href="#">proposed project proposal</a>).</p>
6(e)	<p><b>Testing outliers and exceptions in the output of a technology-enabled procedure</b></p> <p>The standards do not provide guidance on considerations relating to testing outliers and exceptions identified by a technology-enabled procedure.</p> <p>The IAASB has issued non-authoritative materials to address this matter (refer to the IAASB’s <a href="#">Technology Page</a> to access the FAQ on Investigating Exceptions &amp; Relevance of Performance Materiality when Using ATT). In responding to feedback on ED-500, the Audit Evidence Task Force also leveraged this FAQ to develop related application material in the Pre-finalization Holding Package of Proposed ISA 500 (Revised).</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Audit regulators</li> <li>• Practitioners</li> <li>• ED-500 feedback</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised)</li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #16</b> in the <a href="#">proposed project proposal</a>).</p>

<sup>12</sup> ISA 520, Analytical Procedures

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>However, this guidance has been challenged by audit regulators. Specifically, some audit regulators believe that Notes 6 and 7 of the FAQ suggest that auditors can choose to ignore the outliers or exceptions identified by a technology-enabled procedure and revert to “alternative procedures” to test the underlying population. Their concern is that this could be interpreted to mean, for example, that auditors can choose to ignore an inordinately large number of outliers or exceptions when more “traditional procedures” (e.g., sampling) of the underlying population is more efficient. Audit regulators have noted that auditors cannot “unsee” what they’ve seen and that it would be inappropriate to ignore the outputs of a technology-enabled procedure.</p>				
6(f)	<p><b>Appropriate use of technology-enabled procedures for confirmations</b></p> <p>ISA 505,<sup>13</sup> which deals with the auditor’s use of external confirmation procedures to obtain audit evidence, is scheduled for revision as part of the project, “Modernization of Other Targeted Standards in the ISA 500 Series” in the Work Plan for 2024-2027, including technology-related revisions.</p> <p>This standard was last revised prior to 2009 and the auditing environment and methods of communication with confirming parties have evolved significantly since then. ISA 505 addresses traditional confirmation methods, such as postal services and fax. Today, auditors use various electronic means for confirmations, including one or more of the following:</p> <ul style="list-style-type: none"> <li>• <b>e</b>lectronic means like email or e-fax;</li> <li>• <b>f</b>irm-acquired or developed automated tools that enable secure communication, such as robotic process automation (RPA)-enabled platforms and Application Program Interfaces (APIs); and</li> <li>• <b>T</b>hird-party intermediaries, like confirmation.com or shared-service centers, which use automated platforms to facilitate confirmation requests.</li> </ul> <p>The widespread adoption of technology-enabled confirmation procedures introduces unique risks, opportunities, and considerations not covered in extant ISA 505. Examples include auditors' control over the automated confirmation process, evaluation of the reliability of</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #3</li> <li>• Guiding action #5</li> <li>• Guiding action #7</li> <li>• Audit regulators</li> <li>• Practitioners</li> <li>• <del>NSSational Standard-Setters</del></li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 505</li> </ul>	<p><b>High</b></p> <p>Prioritized as per the <a href="#">IAASB's Strategy and Work Plan for 2024-2027</a>.</p>

<sup>13</sup> ISA 505, *External Confirmations*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	audit evidence obtained electronically, and ensuring the security of communication channels to verify that confirmations are sent to and received from the appropriate third party.				
6(g)	<p><b>Appropriate use of technology-enabled procedures in inventory counts</b></p> <p>ISA 501<sup>14</sup> deals with, among other matters, specific considerations in obtaining audit evidence relating to inventory. This standard is scheduled for revision as part of the project, “Modernization of Other Targeted Standards in the ISA 500 Series” in the Work Plan for 2024-2027, including technology-related revisions.</p> <p>ISA 501 includes <u>a requirements</u> for auditors to <u>perform alternative procedures if attending the physical inventory counts in-person unless is impracticable</u> (paragraph 7). <del>However, b</del>Business interruptions during the COVID-19 lockdown made physical attendance of inventory counts impracticable in some cases, leading auditors to leverage technology to attend inventory counts remotely (e.g., location cameras, drones, etc.). <u>Additionally, the increasing use by entities of automated- warehouses powered by emerging technologies (e.g., a fleet of fully autonomous robots and AI-powered software) that operate with minimal human access has also made physical attendance by auditors impracticable to auditors.</u> <del>The use of technology in these cases offered benefits, but also challenges, including challenges in evaluating the condition of the inventory (e.g., whether any of it is obsolete) and not having visibility over the entire facility.</del></p> <p><u>These examples have use of remote inventory count technologies has</u> raised questions among regulators and practitioners about how the use of those technologies <u>by auditors and entities</u> maps to <u>ISA 501</u><del>the auditing standards.</del></p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #3</li> <li>• Guiding action #5</li> <li>• Audit regulators</li> <li>• Practitioners</li> <li>• <del>N</del><u>S</u><del>ational</del> <del>Standard-Setters</del></li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 501</li> </ul>	<p><b>High</b></p> <p>Prioritized as per the <a href="#">IAASB's Strategy and Work Plan for 2024-2027</a>.</p>
6(h)	<p><b>Documentation requirements when performing technology-enabled procedures</b></p> <p>The growing use of technology in audits is giving rise to questions about what auditors should be documenting when designing and performing technology-enabled procedures.</p> <p>The IAASB issued non-authoritative materials to address some of these questions (<a href="#">refer to the IAASB's Technology Page to access see the FAQ on: Audit Documentation when Using Automated Tools and Techniques</a>). However, questions persist.</p>	<ul style="list-style-type: none"> <li>• ED-500 feedback</li> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 230</li> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-finalization Holding Package of</li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #12</b> in the <a href="#">proposed-project proposal</a>).</p>

<sup>14</sup> ISA 501, *Audit Evidence—Specific Considerations for Selected Items*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>Specifically, clarification is sought on <u>documentation considerations, including the following</u>:</p> <ul style="list-style-type: none"> <li>• Whether the data used as an input into the technology-enabled procedure needs to be retained;</li> <li>• Whether each successive set of refinements being made to the parameters used in a technology-enabled procedure needs to be documented, or whether documenting only the final set of parameters is sufficient;</li> <li>• Whether the auditor needs to retain the data output from the technology-enabled procedure or simply a description of the identifying characteristics of the output; <b>and</b></li> <li>• Whether the documentation requirements are different when a technology-enabled procedure is intended to be a risk assessment procedure or a further audit procedure;</li> <li>• <u>What information should be retained at the engagement level versus what documentation could be retained at the firm level.</u></li> </ul> <p>There is a further question of clarifying how auditors determine the sufficiency of their documentation related to technology-enabled procedures using the “experienced auditor” <u>test requirement</u> in ISA 230.<sup>15</sup> Specifically:</p> <ul style="list-style-type: none"> <li>• Is the “experienced auditor” from a similar jurisdiction, with similar expertise and technological access?</li> <li>• Is the “experienced auditor” an individual that has experience with the specific technology-enabled procedure used?</li> </ul>			<p>Proposed ISA 500 (Revised)</p> <ul style="list-style-type: none"> <li>• ISA 520</li> </ul>	
<b>Theme#7: Using the work of a (management’s or auditor’s) expert</b>					
7(a)	<p><b>Evaluating the work of an auditor’s expert</b></p> <p>ISA 620<sup>16</sup> deals with the auditor’s responsibilities relating to the work of an auditor’s expert when that work is used to assist the auditor in obtaining sufficient appropriate audit evidence.</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #6</li> <li>• Audit regulators</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 620</li> </ul>	<p><b>Medium</b></p> <p>ISA 620 was classified as a “reserve topic” in the <a href="#">IAASB’s Strategy and Work Plan for 2024-2027</a> because, although the IAASB did receive</p>

<sup>15</sup> ISA 230, *Audit Documentation*, paragraph 8

<sup>16</sup> ISA 620, *Using the Work of an Auditor’s Expert*

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	<p>The increasing sophistication of technologies used by auditors' experts to perform their work, including Gen AI, may make it more challenging for auditors to comply with the ISA 620 requirements. Specifically, the auditor is required to understand and evaluate the adequacy of the expert's work (see paragraphs 12–13 and A32–A40) and that may become more challenging when the auditor's expert is using technology that <u>may</u> lacks interpretability or explainability (also see Issue 6(b) above).</p> <p>This may exacerbate concerns by audit regulators who find that auditors are not consistently evaluating the relevance and reasonableness of the findings or conclusions of an auditor's expert (as required by paragraph 12(a) of ISA 620).</p> <p>There is an opportunity for the Board to clarify how auditors may satisfy their responsibilities in evaluating the adequacy of the expert's work when emerging technologies, including Gen AI, are used by the experts.</p>				<p>feedback on revising this standard, other candidate topics for the Work Plan were considered to be higher priorities at the time (using the criteria as elaborated in the public agenda papers for the Strategy and Work Plan).</p> <p><a href="#">Because reserve topics in the Work Plan could be elevated to projects based on, for example, changes in the environment relating to emerging issues, the Technology Team will continue to monitor this topic, including the need to develop non-authoritative materials.</a></p>
7(b)	<p><b>Evaluating the work of a management's expert</b></p> <p>Like in Issue 7(a) which deals with the auditor's expert, ISA 500 (paragraph 8) and the Pre-finalization Holding Package of Proposed ISA 500 (Revised) (paragraph 11) also require, depending on the significance of the management expert's work for the auditor's purposes, the auditor to obtain an understanding of the work done by the expert and to evaluate the appropriateness of that work.</p> <p>The same challenges that are described in Issue 7(a) may also apply to this issue.</p>	<ul style="list-style-type: none"> <li>• Guiding action #2</li> <li>• Guiding action #4</li> <li>• Technology experts</li> </ul>	<ul style="list-style-type: none"> <li>• Standard-setting actions</li> </ul>	<ul style="list-style-type: none"> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised).</li> </ul>	<p><b>HighMedium</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #2, #13, and #17</b> in the <a href="#">proposed project proposal</a>).</p>
7(c)	<p><b>Experts are presumed to be humans in the standards</b></p> <p>ISA 620 which deals with the auditor's expert, ISA 500, and the Pre-finalization Holding Package of ISA 500 (Revised) either explicitly refer to the expert as human or imply it. However, new technologies, including artificial intelligence and robotic process automation are, in some ways, designed to reduce, and in some cases eliminate, the need for human involvement.</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #2</li> <li>• Technology experts</li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> </ul>	<ul style="list-style-type: none"> <li>• ISA 500</li> <li>• ISA 620</li> </ul>	<p><b>MediumLow</b></p> <p>This is a <u>lowmedium</u> priority issue because the IAASB has not heard a lot of feedback on this matter. The Technology Team proposes that further information gathering be</p>

#	Issue	Source of insight	Proposed actions	Possible standards	Prioritization (High, Medium, Low) and details about proposed actions
	During the Technology Position session of the June 2024 IAASB meeting, a Board member asked the Board to consider whether the assumption in the IAASB standards that experts must be humans, or at least involve human interaction (i.e., human-in-the-loop), remains valid today.				undertaken to further explore the issue.
<b>Theme#8: Technological Resources and Professional Skepticism</b>					
8(a)	<p><b>The impact of using technology-enabled procedures on the exercise of professional skepticism</b></p> <p>The IAASB was asked by members of the Stakeholder Advisory Council in a meeting in November 2024 how the IAASB’s standards relating to professional skepticism are impacted by the increasing use of technology-enabled procedures in engagements.</p> <p>The IAASB also received feedback from other stakeholders, including on ED-500, that the IAASB should not overemphasize the challenges associated with using technology-enabled procedures as that type of messaging may serve to unintentionally stifle innovation.</p> <p>The IAASB’s Technology Position Statement’s Guiding Action #5 now directs the Board to appropriately balance references to challenges and opportunities associated with using technology-enabled procedures in engagements.</p> <p>To act on Guiding Action #5, the Fraud Task Force <del>is proposing</del> changes to paragraph A9 of <del>the Proposed</del> ISA 240 (Revised) that <del>is targeted for approval will be presented to</del> the <del>Board at the December 2024</del> <a href="#">March 2025</a> IAASB meeting to highlight the benefits of using technology-enabled procedures as a means of enhancing the exercise of professional skepticism.</p> <p>The Audit Evidence Task Force also addressed feedback on ED-500 by relocating application material that referred to automation bias in the Pre-finalization Holding Package of Proposed ISA 500 (Revised) to follow the description of the benefits of using technology. This was intended to offer a balanced perspective.</p> <p>There may be other opportunities throughout the standards to consider whether matters related to professional skepticism remain appropriately balanced within the context of the</p>	<ul style="list-style-type: none"> <li>• Guiding action #1</li> <li>• Guiding action #5</li> <li>• Guiding action #6</li> <li>• ED-500 feedback</li> <li>• <a href="#">Stakeholder Advisory Council</a></li> <li>• <a href="#">Practitioners</a></li> </ul>	<ul style="list-style-type: none"> <li>• Further information gathering</li> <li>• Standard-setting actions</li> <li>• Non-authoritative materials</li> </ul>	<ul style="list-style-type: none"> <li>• <a href="#">ISQM 1</a></li> <li>• ISA 200</li> <li>• ISA 220 (Revised)</li> <li>• ISA 300</li> <li>• ISA 315 (Revised 2019)</li> <li>• ISA 330</li> <li>• Pre-finalization Holding Package of Proposed ISA 500 (Revised)</li> <li>• ISA 520</li> <li>• ISA 530<sup>17</sup></li> </ul>	<p><b>High</b></p> <p>This is in scope of the Audit Evidence and Risk Response project (refer to <b>Issue #2 and #3</b> in the <a href="#">proposed project proposal</a>).</p> <p><b>Medium</b></p> <p>The Technology Team will continue to monitor emerging issues with respect to professional skepticism, which may inform ongoing or future standard-setting projects.</p> <p>The IAASB may also develop non-authoritative materials that address relevant matters.</p>

	growing use of technology in engagements. Also, additional matters may need to be highlighted from a professional skepticism perspective.				

# Appendix 1– Inventory of references in ISAs and ISQMs to technology used in audits and systems of quality management

This inventory was created through a key word search of the following terms in the ISAs and ISQMs: automated tools and techniques (ATT), computer-assisted audit techniques (CAAT), technology, and technological resources.
